Performance Testing Phase

Electric Vehicle Market Performance & Insights

This document records the current validation status of the Tableau Public project after the desktop application froze during development. The project was published to Tableau Public to preserve progress, and development then continued in the web version. The published workbook remains accessible. Some KPI and visualization layout formatting issues are visible when sharing/viewing the project and are intentionally left for a later correction pass.

1. Testing Objectives

- Confirm that the published Tableau Public workbook remains accessible after the desktop freeze.
- Check that the main dashboard, analytical views, and Story can be opened in the published version.
- Review KPI calculations, chart measures, labels, and units for consistency with the prepared dataset.
- Record the known shared-view layout issue without claiming it has already been resolved.
- Define follow-up checks to run after the dashboard layout is corrected.

2. Test Environment and Current Status

Authoring history	**Created initially in Tableau Public Desktop; after the application froze during Dashboard 2 development, progress was published to Tableau Public and work continued in the web version.**
Published workbook access	Confirmed accessible by the user.
Current known issue	Some KPI and visual formatting/layout appears distorted in the shared/published view.
Resolution status	Layout correction deferred to a later pass.
Dataset	ev_market_preprocessed_combined.csv
Prepared dataset size	299,999 rows × 38 columns, as recorded in the preprocessing notes.
Scope	Main dashboard, analytical worksheets, final insight/recommendation/conclusion dashboard, and Story sequence.

3. Current Test Results

Test ID	Check	Current result	Status
PT-01	Published workbook opens	User confirms that the published Tableau Public version is accessible.	Confirmed
PT-02	Progress preserved online	The published version was used to continue work after the desktop app froze.	Confirmed
PT-03	Shared-view layout	Some KPI cards and visual formatting/layout appear distorted when the project is shared/viewed.	Issue observed
PT-04	Desktop-local recovery	Local worksheets, dashboards, and Story were no longer available after the desktop app was closed; recovery has not been confirmed.	Unresolved
PT-05	KPI calculation accuracy	Each KPI's field, aggregation, and displayed	Pending verification

		value still needs a focused check against the source data.	
PT-06	Chart value accuracy	Chart measures, sorting, units, and selected values need to be verified against the prepared dataset.	Pending verification
PT-07	Filters and interactions	Filters and any dashboard actions need to be tested in the published workbook.	Pending verification
PT-08	Story sequence	The Story sequence should be checked end-to-end, including the final Key Insights, Strategic Recommendations & Conclusion dashboard after Price Distribution.	Pending verification
PT-09	Readability after layout fix	Recheck clipping, spacing, legends, KPI alignment, and text size after layout corrections.	Deferred
PT-10	Cross-device/browser display	Compare the published view on the intended presentation device and at a standard browser window size.	Pending verification

4. Known Issue and Follow-up Plan

Issue: KPI cards and some visuals do not retain the intended formatting/layout in the shared published view. The workbook is accessible, so the current priority is to preserve the published version and then correct the layout.

1. Keep the current published version available as a safety copy until a corrected version is verified.
2. Review dashboard sizing and fit settings, tiled/floating placement, container alignment, padding, and text/label sizes.
3. Check whether the dashboard is designed for a fixed desktop canvas or a range of browser/device sizes; adjust the layout for the intended sharing context.
4. Review KPI card containers and each worksheet's fit setting; verify that labels, legends, and marks are not clipped.
5. Publish/save the corrected version only after checking the preview, then open the shared link again to confirm the change.
6. After correction, repeat PT-03, PT-09, and PT-10 and record the observed result.

5. Defect Tracking

Only issues observed so far are recorded here. Other tests remain pending until they are executed; this document does not claim that the workbook is fully validated.

Issue ID	Observed issue	Planned action	Status
EV-UI-01	KPI cards and some visuals show formatting/layout problems in the shared published view.	Review dashboard size, fit, containers, spacing, and KPI alignment; retest after correction.	Open
EV-REC-01	Local desktop project components were no longer available after the freeze/close sequence; local recovery is not confirmed.	Preserve the accessible published workbook and check available download/recovery options before making risky changes.	Unresolved

6. Exit Criteria

☐ Published workbook remains accessible through the intended share link.

☐ KPI calculations and chart measures have been checked against the prepared dataset.

☐ The shared-view layout issue is corrected and verified after reopening the published link.

☐ Story points are in the intended order and all views are readable at presentation size.

☐ Filters and interactions have been checked where present.

☐ Remaining limitations and any unresolved defects are documented honestly.

7. Testing Summary

Current outcome: the published workbook is accessible, and work has continued in Tableau Public web. A shared-view formatting/layout issue is known and remains open for later correction. KPI/chart accuracy, filter behavior, and post-fix cross-view presentation checks are still pending. Therefore, the project is not described as fully performance-tested at this stage.
